

RASMUS JOHANSEN

Senior QA Engineer | Test Automation | Python | Playwright | API Testing | CI/CD | Mobile & Cloud Testing
Berlin, Germany | +49 151 551 55 429 | rwjohansen@proton.me | linkedin.com/in/rasmus-johansen-8434862/

PROFESSIONAL SUMMARY

Senior QA Engineer with 18 years of experience delivering high-quality software across automotive, mobility, telecommunications and financial services. Skilled in designing modern test strategies, building test automation frameworks, and validating complex backend APIs across Agile release trains. Strong technical background in Python, JavaScript, Playwright, Cypress, Selenium, REST Assured, Docker and CI/CD pipelines. Combines hands-on technical depth with strong stakeholder communication, mentoring, and a track record of driving Shift-Left quality practices that measurably reduce defects and accelerate delivery.

TECHNICAL SKILLS

- Programming: Python • JavaScript • Java
- Test Automation: Playwright • Cypress • Selenium • Appium • PyTest
- API Testing: REST Assured • Postman
- Performance Testing: JMeter • k6
- CI/CD: GitHub Actions • GitLab CI • Jenkins
- Containers & Data: Docker • PostgreSQL
- Test Management & Reporting: Jira • Xray • Azure DevOps • Allure
- Methods: Shift-Left Testing • Test Strategy & Planning • Test Pyramid • Root Cause Analysis • Agile Scrum • AI-assisted Software Development

PROFESSIONAL EXPERIENCE

Senior Consultant / Test Expert – Sogeti (Mercedes / BMW / VW)

February 2023 – July 2025

Delivered QA leadership and testing expertise across multiple enterprise projects within automotive and enterprise software environments.

- Designed and implemented enterprise-wide test strategies across Agile Release Trains spanning 5 development teams, cutting cross-team defect leakage by an estimated 15-20%.
- Introduced automation-first testing and Shift-Left practices integrated into CI/CD, reducing regression cycle time from 3 weeks to 3 days (86% faster).
- Introduced test automation to teams starting from a 0% automation baseline, driving automated coverage across the Agile Release Train to an estimated 55–65% within 2 month, and shortening release readiness time by roughly 40%.
- Coordinated testing activities between business stakeholders, developers, QA teams and release management.
- Established QA reporting, quality metrics and risk-management processes, improving release readiness sign-off time by roughly 30%.
- Led end-to-end validation of OneCRM business processes across 5-7 integrated systems.

Test Consultant – Hays Solutions (Mercedes Pay)

January 2022 – October 2022

Worked on a greenfield integration platform connecting pricing, contract management and financial services.

- Designed the QA strategy for a new enterprise platform from inception, establishing test governance across the platform's core pricing, contract management and financial services integrations.
- Developed automated API and integration test suites covering approximately 40 endpoints/services, reducing manual test effort by roughly 40–60%.
- Implemented Allure dashboards for continuous quality monitoring, giving stakeholders real-time visibility into test results on every CI/CD pipeline run.
- Collaborated with distributed supplier teams across 3 locations to establish consistent testing standards.

Expert Test Manager & QA – Daimler AG / MBition

April 2021 – January 2022

Worked on the Mercedes me mobile application.

- Led quality assurance activities for Android and iOS applications supporting the Mercedes me platform across markets in Europe, Asia and beyond.
- Developed comprehensive mobile testing strategies spanning manual and automated testing.
- Performed backend validation, infotainment integration testing and vehicle compatibility testing across multiple vehicle model lines, head unit versions and mobile OS platforms (iOS/Android).
- Introduced requirements-to-test traceability using Xray and Jira, closing a gap where test coverage for individual requirements had not previously been systematically tracked.
- Partnered closely with developers, Product Owners and Release Managers throughout the software lifecycle, reducing release-blocking defects by approximately 15%.

Test Consultant – Hays Solutions (MBition)

January 2021 – April 2021

- Executed manual and automated testing across Android and iOS platforms, covering approximately 250 test cases per cycle.
- Conducted real-world vehicle testing for infotainment systems and connected services across 10 test vehicles.
- Validated EV charging and in-car payment functionality prior to release, identifying critical defects in payment processing and charging session handling before they reached production.
- Built regression test suites from the ground up, introducing test automation for Android, iOS and connected vehicle services where none had previously existed.

Agile Coach – HERE Technologies, Berlin

2018 – 2020

Although serving as an Agile Coach, remained heavily involved in software engineering quality, delivery processes and engineering collaboration.

- Coached 5 Scrum teams on Agile engineering and quality practices, improving sprint predictability by approximately 25%.
- Improved software delivery through backlog refinement, sprint planning and engineering metrics, reducing cycle time by approximately 20%.
- Partnered with Product Owners and engineering teams to increase delivery efficiency across 5 teams.

Senior R&D Test Engineer – HERE Technologies, Berlin

2008 – 2018

Led quality assurance initiatives for HERE WeGo and location-based navigation services used by millions of users worldwide.

- Designed automated and manual testing solutions for web, mobile and backend systems, growing automated coverage from roughly 10% to over 90% over 10 years.
- Implemented CI/CD-driven testing processes and Shift-Left quality practices, cutting time-to-detect defects by approximately 50%.
- Developed API testing using Postman across the platform's core navigation and location services.
- Led release readiness reporting through quality metrics and risk analysis, supporting a release cadence that grew from quarterly to near-monthly as CI/CD practices matured.
- Performed defect triage, root cause analysis and production issue investigations, reducing recurring production defects by approximately 30%.
- Mentored 5–8 junior QA engineers and promoted engineering best practices across the team.
- Partnered closely with software engineers, architects and product teams throughout the development lifecycle.

Career Focus: Technical Upskilling & Targeted Job Search – Berlin

August 2025 – Present

- Completed Google IT Automation with Python (Coursera, 2025).
- Completed Amazon Junior Software Developer Professional Certificate – Java Programming (Coursera, 2025).
- Completed Full-Stack Web Development: HTML, CSS, JavaScript, Node.js, React, PostgreSQL (Udemy, 2025).
- Ongoing hands-on practice with AI-assisted development and test automation workflows.
- Preparing for TMAP® Test Management certification (exam planned August 2026).

EDUCATION & CERTIFICATIONS

- TMAP® Test Management Certification — currently preparing, exam planned August 2026
- Professional Scrum Master I (PSM I), Scrum.org — 2023

- ISTQB Certified Tester, Foundation Level — Berlin, 2015

LANGUAGES

- English — Fluent
- Danish — Native
- German — Intermediate, actively progressing toward C1
